ADP70458

New expression vectors for the large-scale production of IL-21 proteins comprises a prokaryotic origin of replication, a transcriptional initiation DNA element, a polynucleotide sequence and a transcriptional

terminator.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           interleukin 21 (II-21) protein. The expression vector comprises the following operably linked elements: (a) a prokaryotic origin of replication; (b) a transcriptional initiation DNA element; (c) an II-21 polynucleotide sequence having the 405 base pair sequence given in SEQ ID NO:27 (ADP70484); and (d) a transcriptional terminator. Also described: (1) a prokaryotic host cell transformed with the expression vector described above; (2) producing II-21 proteins; (3) isolating insoluble II 21 protein; and (4) a composition comprising an II-21 protein comprising amino acids residues of the 134 amino acid sequence given in SEQ ID NO:28 (ADP70485) at a concentration of about 10 mg/ml II-21 protein in 10 mM istidine, and 4.7 % mannitol at pH 5.3. The composition and methods are useful for the large-scale production of II-21 in prokaryotic hosts. The present sequence encodes a human II-21 protein which has been codon optimised for prokaryotic expression, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 405;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  galphall Ligand and the polynucleotide encoding it. The invention also gives the sequence for the zalphall receptor and the polynucleotide encoding it. The zalphall Ligand polypeptide stimulates proliferation of encoding it. The zalphall Ligand polypeptide stimulates proliferation of NK cells, proliferation of T-cells propertions, the activation of NK cells, proliferation of E-cells stimulated with anti-CD40 antibodies, stimulates an antigenic response in a mammal, and reduces proliferation of E-cells stimulated with anti-IgM antibodies. The zalphall Ligand polypeptide is also useful in preparing antibodies that bind to zalphall Ligand epitopes. The zalphall Ligand polypuncleotides can be used as probes or primers to clone regions of a zalphall Ligand gene, and in gene therapy. Zalphall ligand may also be used to identify inhibitors of its activity, to enhance the generation of anti-tumour responses with or without the infusion of donor lymphocytes, and to activate or stimulate the immune system. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New zalphall ligand polypeptides and polynucleotides, useful for stimulating proliferation, activation, differentiation and/or induction of inhibition of specialized cell function, or for stimulating an

                                                                                                                       The invention relates to stimulating an immune response in a mammal CC exposed to an antigen or pathogen comprises administering a composition CC comprising mature zalphall ligand polypeptide comprising residues 32-162 CC of ADH44572 in a pharmaceutical vehicle. Also included are stimulating an CC (comprising: (a) determining (in)directly the level of antigen or pathogen CC (comprising (in)directly the level of antigen or pathogen present in the mammal; (b) administering a composition CC comprising zalphall ligand polypeptide in a pharmaceutical vehicle; (c) CC determining (in)directly the level of antigen or pathogen in the mammal; (c) and (d) comparing the antigen or pathogen for pathogen in the mammal; (c) change in the level indicates stimulation of immune response), and CC thange in the level indicates stimulation of immune response), and CC spathogen (comprising; (a) determining a level of antigen or pathogen-comprising; (a) determining a level of an antigen or pathogen (comprising; (a) determining a level of antigen or pathogen-comprising a post CC dipper stimulation level of the antigen- or pathogen-specific antibody; (b) administering a composition comprising zalphall CC ligand polypeptide in a pharmaceutical vehicle; (c) determining a post CC (d) comparing the level of the antibody in (a) with (b), where an CC increase in the antibody level indicates stimulation of immune response). CC The method is useful for stimulating an immune response in a mammal CC exposed to an antigen or pathogen, and for enhancing anti-tumour activity resulting in a reduction in tumour progression, decrease in metastasis, CC or tumour stasis, The tumour may be a haematopoietic tumour, a lymphoma CC range of diseases arising from defects in the immune system, e.g. CC systemic lupus servthematosus, rheumatoid arthritis. mysthemia gravis. Or systemic lupus erythematosus, rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novak JE,

The polypeptide of the invention may be useful for boosting immunity to infectious diseases and treating immunocompromised patients, such as HIV patients, as well as in improving vaccines. The current sequence is that of the human zalphall ligand cDNA fragment of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; zalphall ligand; pharmaceutical; cancer; immune response; melanoma; tumour; solid tumour; haematopoietic tumour; lymphoma; huma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an isolated polypeptide comprising a sequence of CC amino acid residues that is at least 90 or 95% identical to residues 41 CC (Gln) to 148 (Ile), or 32 (Gln) to 148 (Ile) of a sequence of 162 amino CC acids (SEQ ID NO:2, human zalphall ligand), fully defined in the CC specification. Also described are: a pharmaceutical composition CC comprising the polypeptide, and a vehicle; a method of treating cancer in CC manmal; a method of stimulating an immune response in a mammal with CC melanoma; a method of stimulating an immune response in a mammal bearing CC attnewer; an isolated polynucleotide comprising a sequence of nucleotides that encode amino acid residues citted above, where the polynucleotide composition (CC comprising the polynucleotide encoding, in a pharmaceutically acceptable composition the specification; a pharmaceutically acceptable complynucleotide; and a solated polynucleotide molecule comprising the control element; and a DNA segment comprising the comprising at CC least 10 nucleotides of the polynucleotide sequence of 642 bp, fully defined in the specification. The molecules, compositions and methods are cuseful for treating cancer, e.g. melanoma, solid tumour, haematopoletic cumour, or lymphoma. This sequence represents a human zalphall ligand concers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 338;

                                                                                                                                                                                                                                                                  The invention comprises a fusion protein that contains a zalphall ligand and a cytokine polypeptide (e.g. IL-2, IL-4, IL-15 or GM-CSF), the fusion protein of the invention binds to the annual receptor protein. The protein of the invention is useful for stimulating the proliferation and/or development of hematopoletic cells. The protein of the invention is also useful in autologous marrow culture. The present cDNA sequence represents a fragment of the human zalphall ligand coding sequence.
                                                                                                                                                                                                                                                 Sequence

                                                                                                                          treatment of diseases or conditions where eosinophils are involved in a protective response in a subject, e.g. allergic conditions and/or parasitic diseases. Methods of the invention are useful for the treatment of diseases or conditions where eosinophils are involved in a protective response in a subject, such as allergic conditions (e.g. asthma, allergic rhinitis or allergic diseases of the skin) and/or parasitic diseases, especially helminthic infection. The current sequence represents the DNA sequence encoding IL-21. Note: This sequence does not decode to that of ADM41017, which we are told in the specification is the amino acid
                                                                                                                                                                                                                                                                                                Use of Interleukin-21 for the treatment of diseases or conditions eosinophils are involved in a protective response in a subject, e. allergic conditions and/or parasitic diseases.

This invention relates to a novel albumin fusion protein having albumin CC or biological activity. Human serum albumin is responsible for a CC significant proportion of the osmotic pressure of serum and also CC functions as a carrier of endogenous and exogenous ligands. The fusion of CC functions as a carrier of endogenous and exogenous ligands. The fusion of CC the therapeutic protein. The albumin fusion protein of the invention may CC albumin for compositions with antidiabetic activity whilst the CC nucleotide sequence which encodes it may be useful for gene therapy. The CC albumin fusion protein is useful for preparing a composition for treating CC diabetes mellitus. The present sequence is a DNA sequence which encodes a CC therapeutic protein of the invention. Note: The sequence data for this CC patent did not form part of the printed specification, but was obtained CC in electronic format directly from WIDO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a new microarray which comprises probes genes involved in psychoneuroendocrinimmune (PNI) activity. The microarray is useful in diagnosing a condition associated with PNI activity, such as CFS, type-2 diabetes, allergic condition, inflau cancer and infection. The present sequence represents a psychoneuroendocrinimmune gene expressed sequence tag. Note the specificatio mentions SEQ ID NO of up to 3314 but only sequences SEQ ID NO 1829 are provided.

                                                                                                                                                                                                                                                                                   proliferation and development of haematopoietic cells in vitro and in vivo. Zalphall ligand polynucleotides can be used as primers or probes for cloning the zalphall gene. The zalphall ligand is useful for treating tumourigenesis. A zalphall ligand-saporin fusion toxin may be used for treating leukaemias and lymphomas. Antagonists against zalphall ligand are useful as research reagents for characterizing ligand-receptor interaction. Antagonists are also useful for inhibiting expansion, proliferation, activation and differentiation of cells involved in regulating hematopoiesis. The zalphall ligand may also be used to stimulate an immune response against B cell tumour, a virus, a parasite or a bacterium. The zalphall polypeptides, polymucleotides, antagonists, agonists and antibodies are also useful for the detection, diagnosis, prevention, and treatment of diseases associated with a zalphall ligand
                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human cytokine, designated zalphall ligand, useful for stimulating the proliferation and/or development of hematopoietic cells in vitro and in vivo, and for treating tumorigenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a human zalphall ligand polypeptide, whis a cytokine. The zalphall ligand is useful for stimulating the proliferation and development of haematopoietic cells in vitro and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 14; Page 204-205; 256pp; English

The present invention relates to the isolation of a novel cytokine, zalphall Ligand and the polymucleotide encoding it. The invention a gives the sequence for the zalphall receptor and the polymucleotide encoding it. The zalphall Ligand polypeptide stimulates proliferation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          natural killer (NK) cells or NK cell progenitors, the activation of NK cells, proliferation of T-cells, proliferation of B-cells stimulated witi anti-CD40 antibodies, stimulates an antigenic response in a mammal, and reduces proliferation of B-cells stimulated with anti-IgM antibodies. The zalphall Ligand polypeptide is also useful in preparing antibodies. The zalphall Ligand polypeptide is also useful in preparing antibodies that bind to zalphall Ligand epitopes. The zalphall Ligand polypucleotides can be used as probes or primers to clone regions of a zalphall Ligand gene, and in gene therapy. Zalphall Ligand may also be used to identify inhibitors of its activity, to enhance the generation of anti-tumour responses with or without the infusion of donor lymphocytes, and to activate or stimulate the immune system. The present sequence encoding for human zalphall Ligand polypeptide is isolated from a cDNA library from activated human peripheral blood cells (hPBCS)
                                                                                                                                                                                                                                                                                                                                                   Interleukin-21; IL-2:
autoimmune disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polynucleotides and polypeptides of interleukin-21 (II-21) antagonists, that bind with specificity and exhibit an EC50 that is not detectable in receptor binding studies. The antagonists of the invention have mutations in the D helix of the II-21 molecule, and can be used to inhibit the activity of II-21 with its cognate receptor. The II-21 antagonists are useful for diagnosing and treating disorders involving the aberrant expression or activity of the II-21 polypeptide, such as cancer, inflammatory and autoimmune disorders, including rheumatoid arthritis, multiple sclerosis, systemic lupus erythematosus, myasthenia gravis and diabetes. The polypeptides can also be used to prepare antibodies that bind II-21 epitopes, peptides or polypeptides, and for enhancing in vivo killing of target tissues. The present sequence is human II-21 (originally designated zalphall ligand) DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New IL-21 polypeptide and encoding polynucleotide, useful for diagnosing and treating disorders with aberrant expression or activity of the IL-21 polypeptide, such as cancer, rheumatoid arthritis, multiple sclerosis and

CC immune response in a mammal exposed to an antigen or pathogen (c) determining (in) directly the level of antigen or pathogen (c) pathogen present in the mammal; (b) administering a composition (c) determining (in)directly the level of antigen or pathogen in the mammal; (c) and (d) comparing the antigen or pathogen in the mammal; (c) and (d) comparing the antigen or pathogen antigen or pathogen in the mammal; (c) and (d) comparing the antigen or pathogen in the mammal; (e) antigen or pathogen in the mammal; (in) determining a level in (a) with (b), where a cc change in the level indicates stimulation of immune response), and (d) comparing; (e) determining a level of antigen or pathogen or pathogen; (b) administering a composition comprising zalphall (c) igand polypeptide in a pharmaceutical vehicle; (c) determining a post administration level of the antibody in (a) with (b), where an comparing the level of the antibody in (a) with (b), where an comparing the level of the antibody in (a) with (b), where an comparing the level of the antibody in (a) with (b), where an cc mammal in the method is useful for stimulating an immune response in a mammal composed to an antigen or pathogen, and for enhancing anti-tumour activity resulting in a reduction in tumour progression, decrease in metastasis, or tumour stasis. The tumour may be a haematopoletic tumour, a lymphoma or a cell tumour because in the immune system, e.g. c systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, or diabetes, for boosting immunity to infectious diseases, treating community to infectious diseases, treating constants. The present sequence is a human Zalphall ligand constants and in improving constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to stimulating an immune response in a mammal exposed to an antigen or pathogen comprises administering a composition comprising mature zalphall ligand polypeptide comprising residues 32-162 of ADH44572 in a pharmaceutical vehicle. Also included are stimulating are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Stimulating an immune response in a mammal exposed to an antigen or pathogen, useful for enhancing anti-tumor activity resulting in reduced tumor progression or metastasis, comprises administering zalphall ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 7; SEQ ID NO 1; 103pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
The invention relates to a novel isolated zalphall ligand polypeptide. The polypeptide of the invention may be useful for boosting immunity to infectious diseases and treating immunocompromised patients, such as HIV patients, as well as in improving vaccines. The current sequence is that of the human zalphall ligand cDNA of the invention.
                                                                                                                                                                                                                    New zalphall ligand polypeptides, useful for boosting immunity to infectious diseases, and treating immunocompromised patients, such as human immunodeficiency virus (HIV) patients, or in improving vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                zalphall ligand; immunity; infectious disease;

```

```
The invention relates to treating Non-Hodgkin's lymphoma, cancer or CC infection and involves administering to the subject a polypeptide having CC a functional activity of interleukin-21 (IL-21). The methods are useful CC for treating Non-Hodgkin's lymphoma; cancer such as renal cell carcinoma, cepithelial carcinoma, breast cancer, prostate cancer, ovarian cancer and CC colon cancer; viral infection such as AIDS, Hegatitis B or C virus, CC gastroenteritis, haemorrhagic diseases, enteritis, carditis, carditis, paralysis, brochiolitis, upper or lower respiratory CC encephalitis, paralysis, brochiolitis, upper or lower respiratory CC disease, respiratory papillomatosis, arthritis, disseminated disease, CC meningitis, and mononucleosis; or bacterial infection, such as an CC infection by a bacteria selected from chlamydiae, listeriae, helicobacter CC pylori, mycobacteria selected from chlamydiae, listeriae, helicobacter CC curuses, Epstein-Barr virus, Cytomegalovirus, Pox viruses Simplex CY viruses, Pastein-Barr virus, Orthomyzoviruses, Paramyzoviruses, CC Influenza viruses, caliciviruses, rabies viruses, and rinderpest viruses. CC The present sequence represents a DNA encoding a human IL-21 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

/note="Vector: pDNR-Dual; Site_1: loxP-Sall; Site_2:
loxP-HindIII; Clones from this_library have been
PCR-amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
available from NCBI's RefSeq]. Template for PCR is cDNA
derived from either pooled cytoplasmic polyA RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Prederick, NCI-Frederick, Frederick, MD 21702). For
information on which gene each clone represents, please
visit our anonymous ftp site at
ftp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat

Template for PCR is CDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxP sites of the pDNR-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, NCI-Frederick, MD 21702). For products are chick processed to the policy of the polic

/note="Vector: pDNR-Dual; Site_1: loxP-SalI; Site_2:
/noxP-HindIII; Clones from this library have been
PCR-amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
available from NCBI's RefSeq). Template for PCR is cDNA
derived from either pooled cytoplasmic polya RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene

Template for PCR is cDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the loxP sites of the pDNR-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC Frederick, ND 21702). PCR-amplified using gene-specific primers to contain the
PCR-amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
available from NCBI's RefSeq). Template for PCR is cDNA
derived from either pooled cytoplasmic polyA RNA from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Frederick, NCI-Frederick, Frederick, MD 21702). For
information on which gene each clone represents, please

quality sequence start: 4
quality sequence stop: 581.
Location/Qualifiers
PCR-amplified using gene-specific primers to contain the complete open reading frame (based on known gene sequences available from NCBI's RefSeq). Template for PCR is cDNA derived from either pooled cytoplasmic polyA RNA from 30 cells lines or pooled total RNA from 10 different tissues (from BD Biosciences/Clontech and Washington University). PCR products are directionally cloned into the lows sites of the pDNR-Dual vector. Library constructed by Dr. Narayan Bhat, Earl Bere III and Hongling Liao (Gene Expression Laboratory, Research Technology Program, SAIC
